

Lotus Kyushu develops new vehicle diagnosis system

All Japan Lotus Club, the nationwide organization consisting of 1,600 independent automobile repair & maintenance shops, held an annual meeting in Kyushu.

In the meeting, an innovative development was introduced to attendees when Lotus Kyushu presented its new vehicle diagnosis system.

The system allows users to send/receive vehicle data to/from database stored in the center server through cell phone. Scanned data of the vehicle is easily sent to the center server. Other Lotus

Kyushu user can easily get the data from the server despite of car manufacturer if it is available.

Currently, vehicle information such as diagnosis data is only controlled and provided by each carmaker.

The new system developed by the Lotus Kyushu will be the first challenge to share vehicle information of every maker among repair shops (users).

As of the end of June, Lotus Kyushu's system has covered 325 vehicle models of total 744 models.

Lotus Kyushu aims to commercialize the new vehicle diagnosis system this fall.

According to the Japan Automotive Service Equipment Association (consists of 23 companies), sales of auto service equipment and tools totaled 101,930 million yen, down 2.6% from previous year.
